

## **Coffee & Bagels with a Mentor**

May 10th, 2018

9-10am EEJMRB Third floor Conference Room

Please join is for an opportunity to network in an informal setting while interacting with prominent members of our campus.

### **Mentor: Dana Carroll**

#### Distinguished Professor of Biochemistry

Professor Carroll works with powerful, exciting and relatively new tools of precise genome engineering, using the ZFN, TALEN and CRISPR-Cas9 platforms. He is also personally interested in the broader uses of genome editing and the societal implications of such uses. Medical applications of genome editing are in their infancy, but also have great promise. He wants to ensure that such uses are developed safely and their benefits are distributed appropriately. Complex ethical and societal issues are raised by these prospects, particularly when modifications to the human germline are considered. He agreed to participate in a discussion with postdocs about societal issues around genome editing.

**Coffee and bagels will be served.**
